

BLITZ CHAIN LUBRICATION SYSTEMS

HASTEC REBS chain lube technology has revolutionized conveyor chain lubrication. Part of our “where you need it, when you need it” lubrication strategy, **REBS** systems supply a precise amount of lubricant exactly to chain wear points, consistently and reliably. Our systems are particularly effective in higher speed applications with challenging physical conditions – high heat, wet or dirty/dusty environments.

- **Increased chain life**
- **Reduced drive train friction**
- **Reduced lube consumption**

The “**BLITZ**” Chain Lubrication system consists of a main oil supply and pump unit, an electronic chain link tracking system and nozzles positioned near the passing links. Proprietary programming code combined with quick response **REBS** dosing pump technology ensures that the lubricant is correctly applied – **even at high speeds!**

INDUSTRY	APPLICATIONS
Automotive	Paint Lines
Insulation	Curing Ovens
Primary Metals	Furnace Charging Tables
